

# Arduino / Programming

- [How-to articles - Arduino](#)

Using a arduino is a great way for your projects to come to life and with its open source library the possibilities are endless.

## Using makerspace arduinos:

In one of the cabinets that you can find in makerspace at ångström we have multiple arduino starting kits that are free to use as long as it doesn't leave the library! If you are working on a project with one of our arduinos and want to save your progress you can always store it in one of our project boxes. The kit also contains a book with a lot of different small projects that are great for learning the basics of how to work with an arduino.

## Arduino courses:

We offer courses in arduino about two times each semester where we go through the basics on how to work with an arduino.

Register to our course at: [Open courses at the university library](#)
